

Project Title

Trekmate

Developers

Roman: API implementation

Max: API implementation

Dave: Backend development dealing with the input storage of data

Bert: Front end using SASS or Materialize (leaning towards SASS) and provide back end support

Project Description

Website that will store travel itineraries for individuals, groups, travel, professionals, and organizations. It will have the capability to provide current weather conditions, points of interest, and contain all travel information for the user(s). (Hotel / airline / car rental / points of interest schedule)
